

DISTECH CONTROLS **ENTERPRISE SERVICES**

DISTECH CONTROLS ENTERPRISE SERVICES PARTNERS DIRECTLY WITH BUILDING OWNERS AND OPERATORS TO DELIVER CONSISTENT, HIGH-QUALITY BUILDING AUTOMATION OUTCOMES ACROSS ANY BUILDING TYPE AND SCALE.

From individual facilities to national and global portfolios, we help standardize systems, accelerate project delivery, and reduce risk by combining factory-backed expertise with a trusted network of system integrators.

Combined with our system integrator network, we've delivered building automation and controls projects across key markets including retail, healthcare, critical infrastructure, higher education, K-12, and more. With every project, our focus centers on providing consistent, reliable results.

WHAT WE OFFER:

1. Technical Expertise: Our team brings deep expertise across building management systems and multisystem environments, helping owners reduce risk and ensure reliable system performance.

- BMS and cross-domain integration experts
- Ability to tackle complex systems and multi-system environments

2. Project Standardization: We help building owners and operators achieve consistent outcomes across sites by standardizing how systems are designed, built, and delivered, making sites easier to operate, maintain, and scale over time.

- **Design & Engineering:** Submittal packages include control drawings, standardized bill of materials, sequence of operations, point naming and addressing, and system riser diagrams
- **Software:** EC-GFX Programming, Niagara Station Programming, and Third-Party Integrations

- **Graphics:** Eclipse Designer Graphics, Niagara PX Graphics, and HMI Graphics

- **Start-up & Commissioning:** BMS Start-up, remote commissioning support, and on-site commissioning support

3. Flexible Support to Meet Demanding Projects:

When projects move fast or scale quickly, we provide the additional capacity owners need to stay on schedule without overextending internal teams.

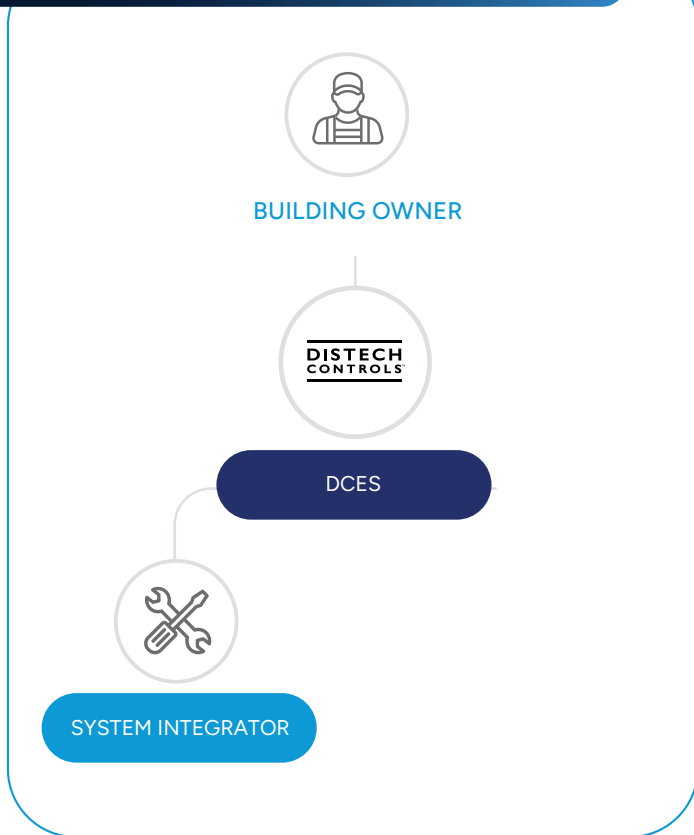

- Increased engineering resources for large or fast-moving projects
- Support for compressed timelines and resource-constrained teams
- Factory-backed execution when you need reinforcement
