

Distech Controls™ announces the opening of its new office in Paris

[Lyon, France, 14 November, 2025] – Distech Controls, a leader in innovative solutions for smart buildings, has just opened a new office in Paris. With this new space, Distech Controls has significantly expanded its office size and now offers a new training center fully equipped with the latest Distech Controls technology.

In 2017, Distech Controls inaugurated its European headquarters in Brignais, near Lyon, to strengthen its presence on the continent and support its growing operations. Building on this momentum, the company later opened a Paris office to accommodate local employees and serve as a first point of contact for customers and partners in the region.

Eight Times The Surface Area

With these new offices located in the Bastille district, Distech Controls will benefit from 300 m² of space and access to numerous facilities, such as an amphitheater, ideal for hosting events, and a rooftop relaxation area. In addition to the training center/showroom, the main space includes an office area with numerous workstations.

This change in size will enable the company to accommodate its expanding Paris team and also to welcome customers, prospects, and partners for initial meetings before a possible visit to the Brignais premises, which houses Distech Controls' European production center.

A Training Center

One of the key requirements that motivated the move was the need to increase training capacity and complement the capabilities of the Brignais training center. Here, Distech Controls will benefit from a 50m² room fully equipped with the latest Distech Controls technology, including a wall of connected products similar to those found at the headquarters in Brignais and Brossard, Canada. The Paris training center will be able to accommodate up to 10 trainees per session.

Distech Controls will offer a comprehensive in-person training program, led by a team of highly qualified and experienced instructors, with practical and concrete content. The courses will cover the company's latest technologies, including the Eclipse® series of connected controllers and the new Resense range with Resense Move and Resense Air. Distech Controls will also offer customized training for its distribution partners and end customers.

“These offices will be used to host our training sessions, showcase our products, and welcome our customers and partners. They will serve as a central hub within the company,” explains Justin Passaquet, Sales Director France at Distech Controls.

“Following the expansion of our premises in Brignais and the launch of extension work in Quebec, Canada, Distech Controls is taking a new step forward with these new Parisian premises,” adds Jérôme Lhote, Deputy CEO for Europe at Distech Controls. *“Our mission is to make buildings smarter, safer, and greener. Expanding our markets by continuing our growth is a key lever in fulfilling this mission.”*

In the building, comfort terminals are controlled by the DC Space range, while technical rooms are controlled by Eclipse S1000 units, all managed by EC-Net supervision software.
